Profile Summary

- Full-Stack Developer with hands-on experience in designing, developing, and deploying scalable, production-grade web applications across front-end and back-end systems.
- Strong industry experience working with IT firms since final year of college, delivering high-quality software solutions in real-world environments.
- Proficient in building performant, responsive, and user-centric applications with a focus on clean architecture, maintainability, and best coding practices.
- Experienced in owning features end-to-end, from requirement analysis and system design to development, testing, and deployment.
- Effective team collaborator with experience in agile and startup environments, ensuring timely delivery and continuous improvement.
- Technical expertise in **Node.js, Next.js, React.js, Express.js, Angular.js, PostgreSQL, Prisma ORM, Drizzle ORM, MongoDB, GraphQL, REST APIs**, and full-stack system design.

Technical Skills

- Node.Js
- Next.Js
- React.Js
- Express.Js
- Angular.Js
- MongoDB
- PostgreSQL
- Prisma ORM
- Drizzle ORM
- GraphQL
- TypeScript
- Docker
- Redis
- Socket.io
- Payment Gateway Integration: Cashfree, Stripe
- Wordpress
- Shopify
- Meta Ads
- Google Ad Sense

Project Management Skills

- Agile Methodologies (Scrum, Kanban)
- Project Management Tools (Jira,Trello,Desklog,Slack,Teams)
- Version control (Git,Github)
- Software Development Life Cycle (SDLC)

Experience

Infinio Technology Solutions — February 2025 – December 2025
Junior Software Developer — Trissur, Kerala

- Contributed to end-to-end development of scalable web applications using the MERN stack (MongoDB, Express.js, React.js, Node.js), building RESTful APIs, dynamic UI components, and optimized database queries to improve performance, scalability, and maintainability.
- Developed a crypto-based “Tap-to-Earn” mobile/web application using Angular and .NET, implementing secure authentication, transaction handling, and real-time reward tracking to ensure reliable and seamless user experiences.
- Engineered and maintained a Learning Management System (LMS) with integrated payment gateway solutions, enabling course purchases, subscriptions, and secure transactions; also built and customized WordPress and Shopify websites, developing themes, plugins, and e-commerce stores for business and client requirements.
- Collaborated with cross-functional teams on digital growth initiatives, feature enhancements, bug fixes, and performance optimization across web platforms, improving user acquisition, engagement, and overall system stability.

Techfriar Technologies — June 2024 – June 2025
Junior Software Developer — Infopark Kochi, Kerala

- Led full-stack development using Next.js, Node.js, Express.js, PostgreSQL, and GraphQL, collaborating with cross-functional Agile teams to design, develop, and deliver scalable software features.
- Implemented Agile, Scrum, and Kanban methodologies to streamline workflows and release cycles, improving overall website performance.
- Designed and optimized database schemas and data models, reducing latency and improving data processing efficiency, resulting in faster system performance.
- Developed scalable backend APIs and core business logic, ensuring reliability, maintainability, and seamless application functionality.
- Delivered end-to-end development of large-scale full-stack applications, enhancing user engagement and interaction through performance tuning and UX improvements.
- Integrated Cashfree Payment Gateway for secure digital payments and implemented Aadhaar and GSTIN verification services to strengthen onboarding, compliance, and fraud prevention processes.

Techfriar Technologies August 2023 – March 2024
Software Development Trainee Infopark Kochi, Kerala

- Developed and implemented dynamic, reusable React.js components for interactive web applications, improving site performance, load speed, and overall user satisfaction.
- Collaborated with a cross-functional team of 3 developers to design and launch 5+ new features, driving higher user engagement through iterative testing and feedback-driven enhancements.
- Optimized JavaScript code and front-end performance, reducing server load by 18% and improving application responsiveness and stability.
- Implemented responsive design, debugging, and full-stack optimizations across front-end and back-end systems, reducing bounce rates and delivering a seamless cross-device user experience.

Project

Online Job Portal for Core Engineers | Next.js, TypeScript, Node.js, Express.js, GraphQL, PostgreSQL

- Designed and developed a specialized job portal platform for core engineering domains (Mechanical, Civil, Electrical, etc.), enabling role-based access and personalized dashboards for candidates, recruiters, and administrators.
- Built the application using Next.js with TypeScript and Server-Side Rendering (SSR) to improve SEO, faster page loads, and enhanced user experience.
- Implemented GraphQL APIs with Node.js and Express.js, optimizing data fetching and reducing over-fetching, while architecting a PostgreSQL relational database for efficient, scalable data management.
- Developed Admin, Company, and Candidate panels with advanced job posting, application tracking, and profile management features, increasing product views and engagement by 50%+ through performance and business logic optimizations.

Fleet Management Web Application | MERN Stack (MongoDB, Express.js, React.js, Node.js)

- Designed and developed a scalable fleet management system to monitor vehicles, drivers, routes, fuel usage, and maintenance schedules using the MERN stack, enabling real-time tracking and operational efficiency.
- Built responsive React.js dashboards with analytics, live status updates, and reporting features, improving fleet visibility and decision-making for administrators.
- Developed secure RESTful APIs with Node.js and Express.js, implementing authentication, role-based access control, and optimized MongoDB schemas for high-performance data handling.
- Implemented features such as GPS tracking integration, trip logs, service reminders, and automated reports, reducing manual processes and improving overall fleet productivity.

Telegram-Based Tap-to-Earn Crypto Application | Angular, .NET, PERN Stack, Redis

- Designed and developed a Telegram-integrated Tap-to-Earn web application for an international crypto token (NILA Token backed by BTC), enabling users to earn rewards through interactive tasks and in-app engagement.
- Built the front-end using Angular and implemented secure .NET backend services, handling authentication, wallet linking, reward calculations, and transaction processing.
- Developed scalable APIs using the PERN stack (PostgreSQL, Express.js, React.js, Node.js) with Redis caching to optimize real-time data processing, reduce latency, and support high concurrent users.
- Integrated in-app advertisements and monetization features, improving user retention and generating revenue while maintaining smooth performance and seamless user experience.

Education

Diploma in Computer Engineering (Lateral Entry) 2022-2024
Seethi Sahib Memorial Polytechnic College — Tirur, ***CGPA: 8.92***

- Completed a 2-year lateral entry diploma with strong focus on software development, data structures, web technologies, and system design.
- Built hands-on projects in full-stack application development, database management, and network programming, strengthening practical problem-solving skills.
- Gained comprehensive knowledge in programming, hardware systems, networking, embedded systems, and computer architecture through lab work and real-world projects.
- Completed industry-oriented training and collaborative projects, preparing for professional IT and engineering environments.
